PROFESSIONAL SUMMARY

Computer Engineering student at TEC, approaching the professional internship stage. Interested in backend development, artificial intelligence, and software development. Academic and project experience using Python, Go, Java, FastAPI, MySQL, TensorFlow, React, and web technologies.

EDUCATION

- **Bachelor's Degree in Computer Engineering** Final semester before professional internship
Costa Rica Institute of Technology (TEC) *Costa Rica*
 - Currently enrolled in: Networks and Entrepreneurship Development.
 - Outstanding academic performance.

PROJECT EXPERIENCE

- **MediaPlatform – Collaborative File Processing Platform (Team Project)**
Docker, Go, SQL, Redis Streams
 - Designed and developed the technical framework and backend architecture of a collaborative platform focused on software security.
 - Containerized all services using Docker, enabling fully reproducible execution of the complete development environment.
 - Created a relational database model using PostgreSQL to ensure data maintainability, consistency, and integrity.
 - Built backend modules in Go focused on high performance and efficient data processing using goroutines.
 - Integrated Redis Streams for event handling and real-time communication between services.
 - Coordinated a 3-person team to implement the different modules in parallel, using GitHub for collaboration and version control.
- **Modern Web and Mobile Applications (Team Project)**
React, Next.js, Python
 - Developed multiple web and mobile applications applying industry-recognized design patterns.
 - Applied best practices in scalability, maintainability, and clean software architecture, specializing in feature-based architecture, design patterns such as reducer, clean code, separation of concerns, and security.
 - Collaborated in development teams under agile methodologies, prioritizing code quality, user experience, and modular, asynchronous teamwork.
 - **Examples:** Niddo, PetHealthTracker, Atlas-Flow, among others. Available on my web portfolio.
- **Artificial Intelligence Architecture and Training (Team Project)**
Python, FastAPI, TensorFlow
 - Designed and developed a backend server with FastAPI to expose machine learning models as services.
 - Trained and fine-tuned neural network models with TensorFlow oriented toward brain tumor image segmentation through a classification/segmentation system.
 - Additionally developed a dedicated model for speech transcription.
 - Optimized the inference pipeline for efficient execution in production environments.

TECHNICAL SKILLS

Programming Languages: Python, Go, JavaScript, TypeScript, SQL
Frameworks & Libraries: React, Next.js, FastAPI, TensorFlow
Databases: SQL, relational database design and modeling
Tools & Infrastructure: Docker, Redis, Git, GitHub
Areas of Interest: Backend development, frontend development, software security, operating systems, compilers and interpreters, artificial intelligence

LANGUAGES

Spanish: Native **English:** Upper-Intermediate (B2)
